Integrated Fleet Automation

Electronic ticketing

Delivery point assessment

Paperless invoicing

TransPac

Delivery Automation Software

TransPac is one of the most efficient solutions for LPG and fuel deliveries. With the new module Delivery point assessment your drivers will be able to capture statistic information about the customers directly on-site (such as tank size, pipe lengths, safety of the site etc.).
Your overall efficiency will significantly increase and the deliveries will be more transparent which allows better planning and optimized delivery process.

TransPac is directly integrated with your fleet management and accounting software. With customer information available on a mobile device, drivers can view customer details, fulfill orders, and print invoices all while on site with the customer. The possible connection to a measuring system allows a fully automated workflow so that the drivers can stay concentrated on their main tasks.

TransPac increases the efficiency and saves you expenses:

Increase driver utilization
Deliver daily schedules directly to driver's mobile device, with an optimized route to ensure the maximum amount of deliveries can be completed for the day.

Improve customer service
Provide detailed information to customers on order history, inventory levels, and scheduled deliveries to help improve their ordering and inventory management processes.

Simplify billing
By delivering an invoice at the point of delivery, the time it takes for you to receive payment will decrease dramatically.

Reduce costs through paperless processes
With electronic signature capture, delivery tickets and invoices can be printed and left on site providing proof of delivery, consensus of volume, and accurate transaction details.
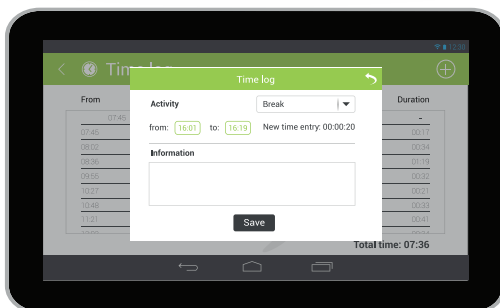

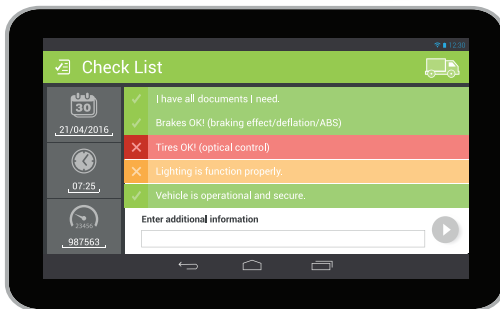

Enhance inventory management
ERP integration allows drivers and dispatchers to know what inventory is available on each truck, enabling changes in load quantities and inventory levels to be monitored in real time.

SaaS integration
TransPac is a cloud-based application that integrates seamlessly with your fleet tracking and planning software, providing a complete fleet management solution that delivers valuable business intelligence to your back office systems.
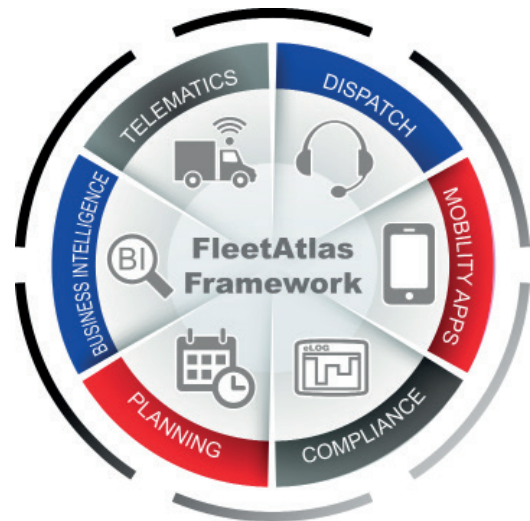

User interface

Features

Among the key features of TransPac are:

- Paperless order management
- Invoicing with on-site print function
- Safety optimized messaging also through speech module
- On-site capturing of customers' statisics (e.g. tank size, pipe lengths etc.)
- Compartments management
- Communication with Measuring system for real data
- Safety check before the departure
- Time logging
- Fleet Tracking with indication of the remaining quantity in the vehicle for critical disposition decisions
- Cash register capability for cash receipts

FleetWatch is a component in a larger complete automation solution named FleetAtlas.

Progressively add components as your company grows.
