

PLUG'N PLAY APP

ONE APPLICATION FOR EVERYTHING

Simple and robust connection of Bluetooth® peripherals to smartphones or tablets in lockdown mode. Wirelessly connect everything from a barcode reader to alarm buttons with the Optidev Plug'n Play App.

Connect in lockdown mode

Works with all Androids

Easy to use

CONNECT PERIPHERALS IN LOCKDOWN MODE

Bluetooth® peripherals such as printers and barcode readers that increase productivity in the workplace have been difficult for users to set up. Previously, you had to develop an interface for each individual app to connect peripherals to a smartphone or tablet in lockdown mode.

Now, you can simply install Optidev's Plug'n Play App on your tablet or smartphone to establish an instant and robust connection to any Bluetooth peripheral. The Plug'n Play App is pre-configured for the most common Bluetooth peripherals such as barcode scanners, printers, headsets, cameras, and alarm buttons.

Connecting with selected peripherals is very easy. Instructions on how to connect are provided in a few simple steps, using images of the available Bluetooth peripherals. Then, the connection is ready for use.

Optidev Plug'n Play App also enables the use of peripherals in third-party applications or on web sites. A barcode scanner can be used by all applications, both proprietary and third party apps. Furthermore, the alpha/numeric keypad with full language support can be customized to suit the user's needs.

WORKING ON ALL ANDROIDS

Connect in lockdown mode

Easily connect any Bluetooth peripherals by installing the Plug'n Play App on your smartphone or tablet in lockdown mode.

Works on all Androids

Optidev Plug'n Play App is developed to work on all Android devices. The software is continuously updated to work with the latest technology.

Easy to use

Optidev Plug'n Play App has a very user-friendly interface that makes it easy to use. Connection of selected Bluetooth® peripherals is done in a few simple steps.
