YM – Yard Management

Overview

The key to better management and organisation of yard processes is visualising the premises in a graphical or tabular form. The clear representation of gates for loading and unloading, in combination with waiting areas and parking spaces, provides the overview you need to time gate reservations for inbound and outbound transports. Workers on the yard communicate via the cadisWEBAPP with transport planning as well as cross dock and yard management. Information is available in real time to all involved personnel.

Through a combining of yard management, terminal handling and container management **cadis** enables the seamless tracking of loading units. Waiting times can thus be reduced to a minimum and the handling processes can be accelerated.

Benefits

■ Optimal dock assignment right upon arrival

■ Coordination between road, yard and cross dock terminal

■ Optimization of follow-up processes, staff assignment and subsequent transports

■ Reduced vehicle waiting times

■ Real-time information about all units on your yard

■ Efficient fulfillment of documentation requirements

YM
Yard Management

Function packages

cadis YM Check

- Inbound and outbound transports
- Check-in and registration

cadis YM Locate&Check

- Recording of gates and yard locations
- Monitoring of units

cadis YM Plan, Locate&Check

- Planning of gates and yard locations
- Execution of transport tasks within the yard

Highlights

- Visualization of the premises on an interactive yard map
- Complete schedule of inbound and outbound transports
- Assignment of traffic to gates for loading and unloading with time slots
- Assignment of waiting areas
- Management of movement of loading units (swap bodies, trailers) on the premises
- Traceable, documented transports
- Recording and analysis of actual data for all relevant yard activities (arrival and departure times, dwelling times, loading units used etc.)
- Reporting of end of loading
- Overview of loading units and their locations on the yard.
- cadisWEBAPP
    - Gate manager: for visualization and reporting of loading and unloading progress
    - Protocol manager: for documentation of arriving and departing transports. Features freely configurable questions e.g. for quality of loading and vehicle, transport papers, regarding driver and qualifications
