SOTI SURF

SECURE WEB BROWSING

SOTI Surf is a secure mobile browser for iOS and Android devices. It can be downloaded from the Google Play Store and the Apple App Store. SOTI Surf is based on the Chromium open-source web browser project and provides users with a fast, familiar browsing interface that makes it easy to access their organization's content on a mobile device. SOTI Surf lets IT organizations control the browsing experience, configuring browser features and security settings to meet the company's unique business needs and end user requirements. Making the enterprise browsing experience "win-win" for IT and the mobile worker, expedites the corporate content strategy and helps businesses take mobility to endless possibilities.

THE BENEFITS OF OPEN SOURCE

By developing SOTI Surf using the Chromium open-source project, SOTI has effectively "hired" thousands of the best software developers in the world. Open-source software is inherently more secure, more flexible, and higher quality than in-house development or proprietary third party packages. Security flaws are identified faster, fixed faster, and made available for integration faster. Why reinvent the wheel when a better one is already available?

WHAT SOTI SURF CAN DO FOR YOUR BUSINESS

IMPROVE THE USER EXPERIENCE

SOTI Surf gives mobile workers a familiar, easy-to-use mobile browser that allows them to access corporate content without worrying about security and privacy. SOTI Surf provides many standard browser features, including:

- Standard browser interface which has tabbed browsing, navigation, home and refresh buttons that users are familiar with.
- Customizable settings such as bookmarks, text scaling, restore tabs and download location.
- Google SafeSearch blocks inappropriate or explicit images from your Google search results.
- Configure website(s) as home screen or as a catalog where frequently visited websites can be pinned.

## CONTROL BROWSER FEATURES

SOTI Surf makes it easy for IT admins to manage browser features and policies to optimize functionality without compromising content security.

- Configure data loss prevention (DLP) features to control what users can do with enterprise content. IT staff can disable copy/paste, screen capture, printing, and sharing from within the browser.
- Optimize the browser for your business environment by setting the default search engine, configuring predefined bookmarks and enabling LDAP login.
- Force cache clearing and history deletion after each browser session.
- Force links and documents to open in the integrated secure document viewer.
- Ability to configure advanced DLP such as disabling access to websites with invalid certificates.
- Enable network restrictions for browsing on Wi-Fi and cellular networks.

MANAGE THE BROWSING EXPERIENCE

SOTI Surf enables IT administrators to control not just how the browser behaves, but where it can go and what it can see.

- Use URL filtering (whitelists/blacklists) to restrict web content by URL or content type.
- Users can browse confidential content on the company intranet through the SOTI Enterprise Resource Gateway (ERG) without the need for expensive and hard-to-setup VPN's.
- Split tunneling through the Internet to access public web pages and through the ERG for company intranet pages.
- Kiosk Mode locks the device and the browser to any websites.
- Ability to clear cookies, hide home menu and bottom bar, and disable keyboard can be configured with advanced Kiosk Mode.
